## Complementing proven and easy-to-use in-cab field software known as Horizon, Headland Turns enables automatic autosteering turns at the end of fields.

Topcon Horizon software brings Headland Turns, an autosteering feature that automatically generates and executes turns at end of rows for a seamless transition into the next pass.

Let the Topcon autosteering solution take full control so you can focus can be on other tasks. Horizon software Headland Turns provides enhanced guidance and automation to improve efficiency and reduce operator stress.

## How it Works

Horizon will automatically generate and execute turns at end of rows.* Topcon technology provides advanced turn compensation, accounting for nearly any implement and application.

*AGS-2 receiver and Autosteering unlock required.

## Supported Applications

- Soil Preparation
- Seeding
- Crop Care
- Harvest
